

HANDS-ON GC-FID, GC-MS, HS-CG-FID, LC-MS, LC-UVDAD
FORENSIC CHROMATOGRAPHY COURSE

Dear attorney friends,

What have you done to future-proof your DUI practice? The times are changing. Drug-related DUI enforcement is the way of the future. In a short time, DUID cases will start to outnumber DUI ethanol cases. If your knowledge isn't greater and your experience not ahead of LEOs and prosecutors, then you will find yourself in a very bad financial situation. Without a doubt, jurisdictions are massively increasing their detection and enforcement efforts when it comes to drug-impaired driving. That can be a good thing. Not one of us, I imagine, is in favor of truly dangerous pharmacodynamically impaired driving. But it is human disaster of Fukushima-like proportions for the motorist accused if there is only the veneer of science that is applied to the problem as too frequently we see that happen in the courtroom when people who are not guilty are invalidly labeled as guilty by bad science.

What have you done to issue spot those problems and help those who have entrusted you with all that they have?

January 16, 2014 marks a good day! Today, it begins to change. It is the first day of a brand new course offered by Axion Analytical Laboratories, Inc. and the American Chemical Society. It is a hands-on GC-MS class that focuses on DUID cases exclusively. It also has one and a half days of intense training in pharmacology (both PK/PD). There is no other course like it in the world.

When you finish this class, you will know more than any other expert that you come across in the courtroom. That is a guarantee. You will be properly armed not just with studies but with actual fundamental and bedrock knowledge into the theory and the practice of how it all works. You will process samples (both extraction and derivatization) and use the GC-MS to identify drugs in biological matrices. You will see and use emerging technology like the Drager 5000DT oral fluid tester. You will learn how to interpret medical records when it comes to pharmacodynamics. This course is a game-changer. It is a win-win. It will both future proof your practice and promote justice.
